

■ EPT Series Fully Automatic Paper Pile Turner

The fully automatic paper pile turner EPT series is used to turn over paper piles when printing on both sides. Besides, it allows operators to quickly change pallets and align and condition piles in a time-saving way, eliminates ink odor and removes the dust by aeration. The paper pile turners are invaluable in replacing manpower, improving productivity and printing quality, and separating sheets to avoid double-sheet in further post-press process. Temperature control device is used to prevent the instability of hydraulic system in high temperature season and cold season. Our machines are built according to CE standards and are designed for high operating safety and easy handling.

Performance characteristics

1. Flip the paper pile to replace the tray

Flip the original tray onto the top of the paper pile through the flip function, which is convenient to manually take out the original tray and replace it with other trays. Then flip the paper pile back to its original position with the flip function (especially when the paper pile is purchased and the tray is made of wood).

2. Align the paper, Remove dust from paper, loosen the paper, dry, Neutralize odors, take out the damaged paper, center, and adjust the temperature, humidity and air volume, replace the tray.

Align: The paper is aligned by blowing (adjustable air volume) and vibrating (adjustable vibration amplitude), which makes the paper loose and removes dust and impurities in the paper pile (prolonging the service life of the printer and improving the printing clarity), and neutralizes the paper smell (playing an important role in food packaging) by adjusting the air volume. The wind makes the ink in the paper pile dry quickly and can adjust the temperature and humidity, to prevent the quality and efficiency from being affected by the warpage of the paper in the subsequent production and processing process. In the process of paper aligning, the damaged paper in the paper pile can be pulled out.

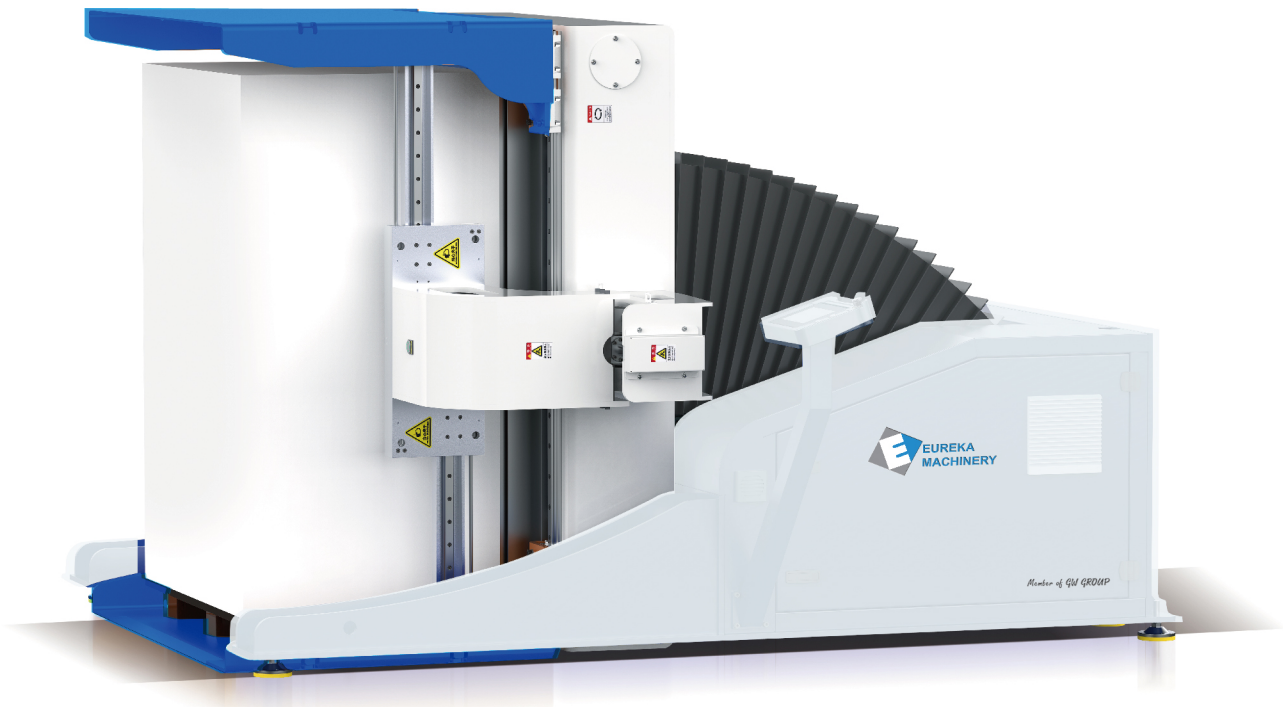

3. The machine can efficiently align the paper pile (about 3 minutes).

4. Automatic paper pile feeding and output function (optional).

»»» EPT-127A

■ EPT-147A/172A/195A/215A

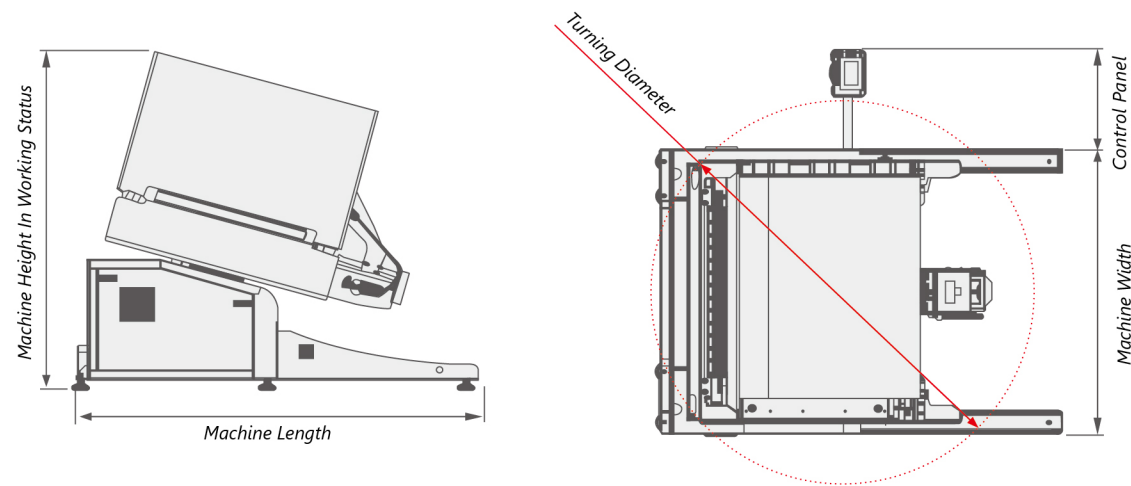

»»» Feature:

- Four auto operation modes
- Three independent air blowers
- Side guide moves automatically
- User interface testing and parameter adjustment system
- Pallet centering function
- Remote control function
- Operation warning system
- Anti-winding airing system
- Variable vibration power adjustment
- Variable aeration air pressure adjustment
- Anti-winding hydraulic system
- Digital clamping pressure control system
- Variable aeration cycle time adjustment system
- Pallet height eliminating function
- Data auto resume after breaking off
- Side guide auto detection function
- PCB integrated circuit system

Option:

- Anti-static device
- Light barrier safety device
- Dust sucking device
